Kitchen Display System

**... A powerful way to speed up service to
your customers and increase employee productivity**

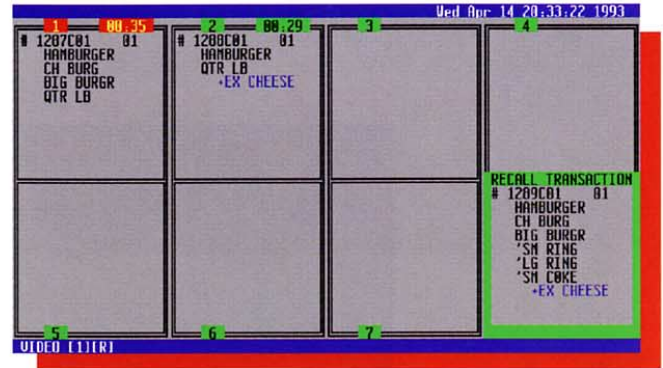

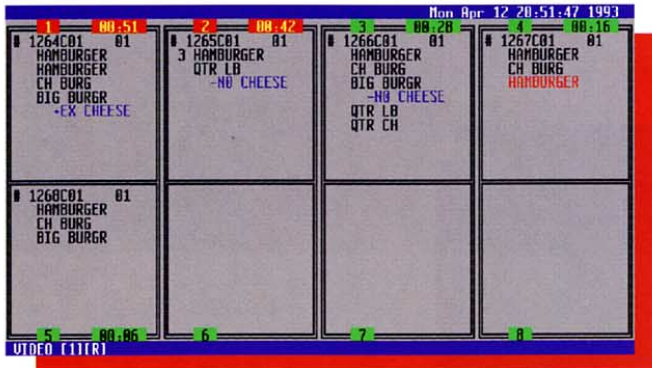

ULTIMATE VIDEO

The color enhanced product ordering system

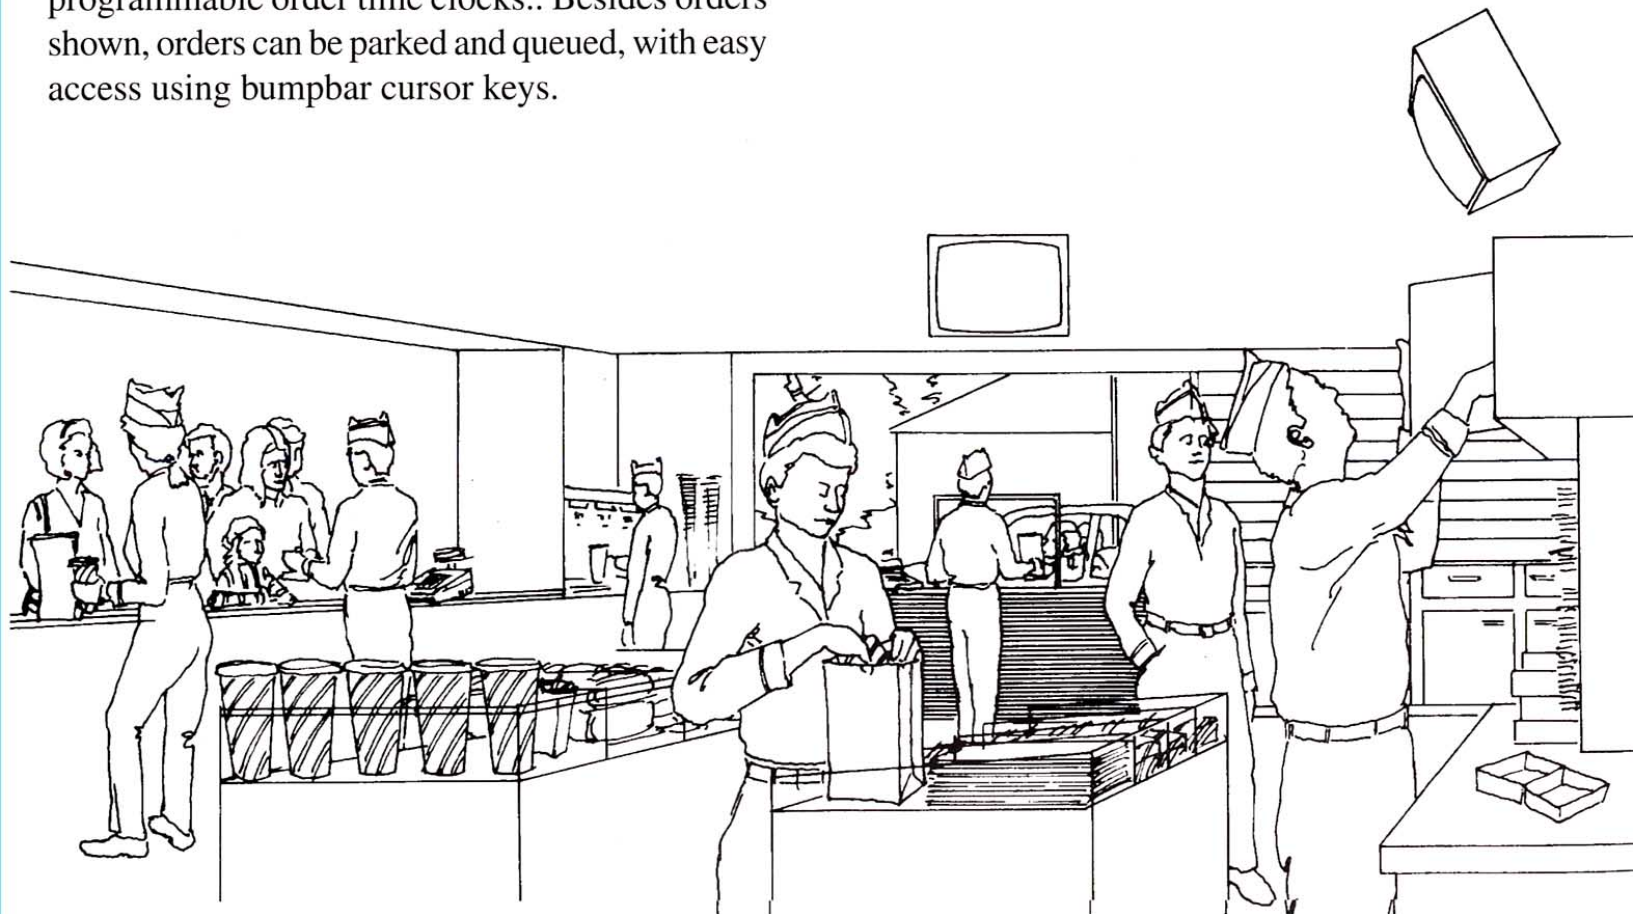

From MicroPlus - a pioneer in developing kitchen video display systems with state-of-the-art technology - comes the Ultimate Video. The Ultimate Video provides your kitchen staff with easy to read, color enhanced product orders. The system provides a powerful tool to help increase customer speed of service and employee

productivity while helping reduce waste. Simple system programming allows for drive thru, food preparation or expediter applications. The Ultimate Video can be further customized to your operation with optional methods of display: batch (order displayed at total) or on-the-fly (item appears when rung).

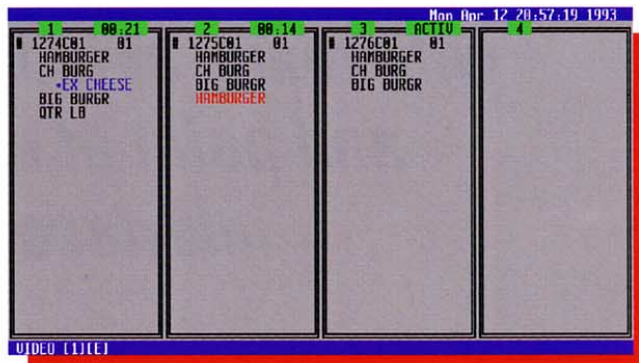

Regular 2x4 Order Screen: The basic order screen for food preparation areas features programmable order time clocks.. Besides orders shown, orders can be parked and queued, with easy access using bumpbar cursor keys.

Recall Orders: Once cleared, orders can be re-displayed.

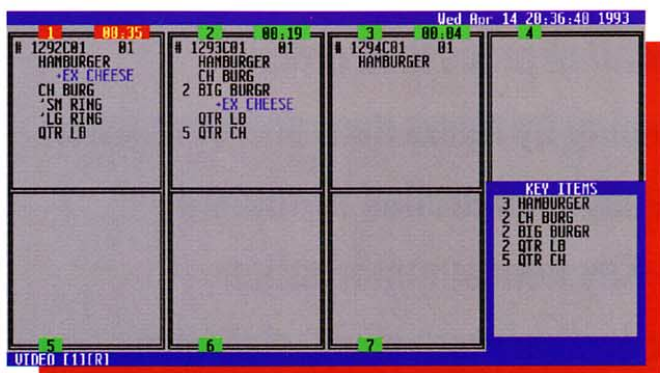

THE ULTIMATE VIDEO uses a stainless steel, sealed bumpbar keypad to remove orders from the screen. This same keypad allows access to other system capabilities including: item summary, order processing status report and recall of cleared orders.

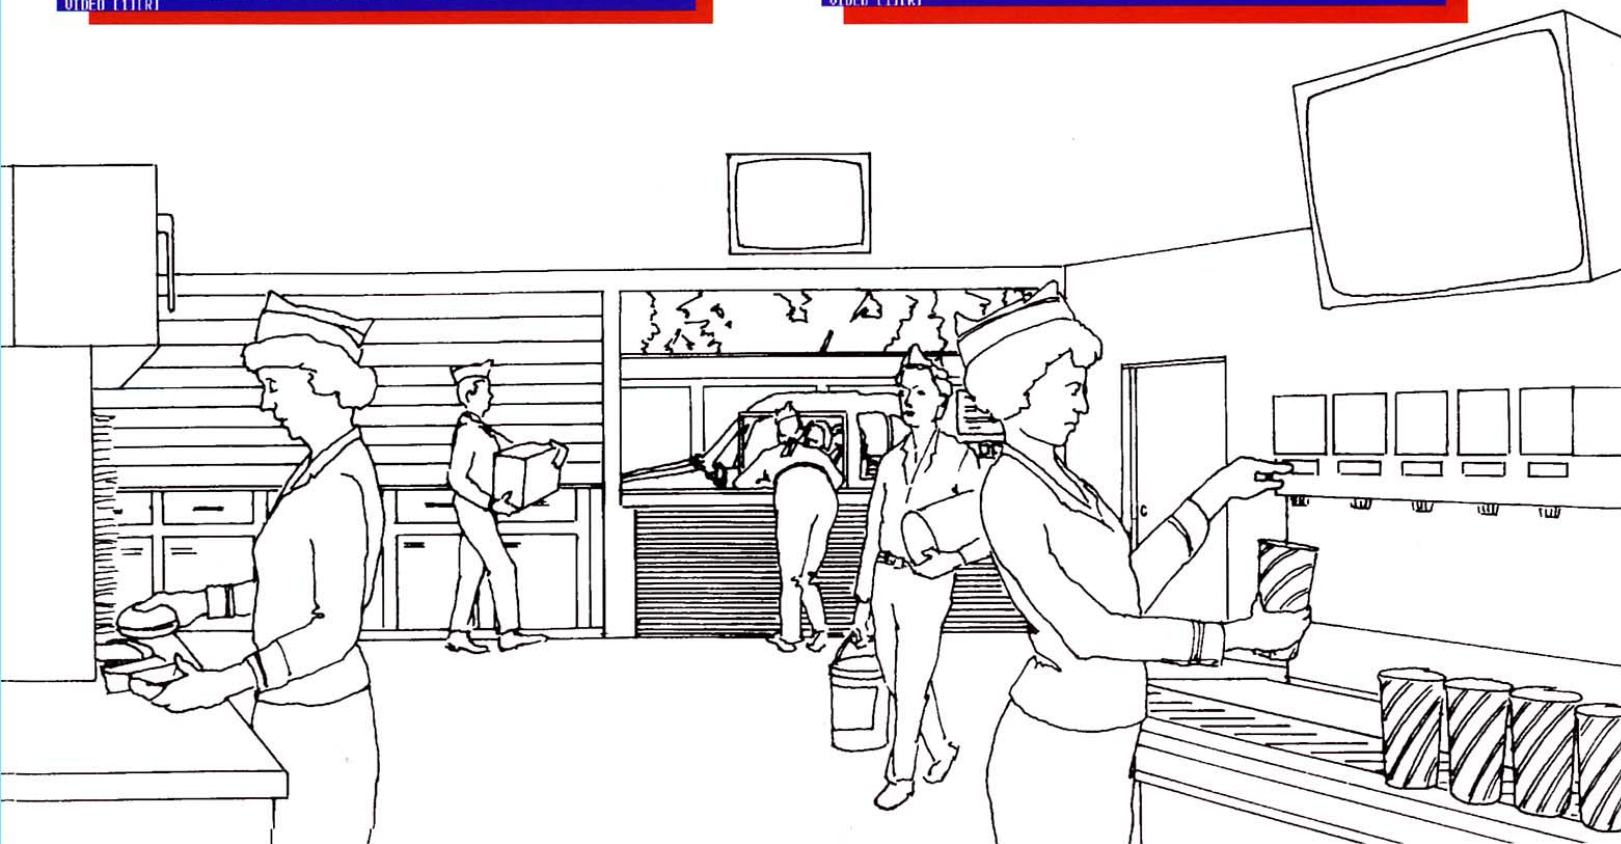

Elongated Order Screen: This method is suitable for expediter or drive-through areas. Both consolidated and single item details can be displayed. Orders can be displayed on-the-fly, one behind, or in batch modes. Automatic routing is provided for peak and off peak times, plus routing by item, register, or kitchen station.

Bin Processing: Summarize all pending and queued order items. Key items are tracked at each screen.

Highlighted Orders: Using the bumpbar, orders can be accented or cleared. The Ultimate Video allows for add-on orders, with optional beepers at each bumpbar.

The Ultimate Video System is compatible with many of today's popular cash register and point of sale systems, with new interfaces added each day.

System Features:

- Supports up to 8 displays per system
- Utilizes standard VGA full color displays
- 4x4 Stainless steel bumpbar keypads
- Batch or "on-the-fly" operation
- Display of up to 8 orders per screen
- Scrolling to view all open orders
- Recall of processed orders
- Routing by menu item and/or register
- Manager controlled re-routing
- 10-Key item summarization
- Production productivity statistics
- Programmable elapsed serve time clock
